AMPLIFY THE ENTOURAGE EFFECT

60 CAPSULES

FULL SPECTRUM CBD - Wanae utilizes the entire hemp plant, preserving the primary & secondary cannabinoids, keeping intact the rich terpenes, flavonoids, and fatty acids which help to enhance the properties of the "entourage effect". The main three components of cannabis plants which provide you with the benefits of the entourage effect are phytocannabinoids, terpenes and flavonoids.

THE MINOR CANNABINOIDS - These naturally occurring compounds address specific deficiencies and imbalances in the body's neurochemistry. While studies are early, research shows a plentitude of benefits. Out of the 110 or so other cannabinoids that have been identified, we know a decent amount of information on the therapeutic potential of about eight of the minor cannabinoids – these eight represent the most studied thus far, although the list seems to be growing every day. These include: CBG, CBGa, THCV, CBN, CBC, CBDa, THCa, 8-THCa.

FLAVANOID RICH - Flavonoids are naturally occurring compounds found in plants. These flavanols are predominant in foods and beverages such as tea, apples, grapes, red wine, cannabis, and cocoa. Numerous studies have demonstrated flavanols help support blood vessel health and healthy circulation. Flavonoids are important because they have shown to have beneficial effects such as; anti-inflammatory, antioxidant, anti-fungal, antibacterial, anti-cancer and anti-allergic activity.

TERPENE RICH - Terpenes are simple organic compounds, made up of carbon, hydrogen, and sometimes oxygen in different arrangements. These compounds create many of the familiar scents and flavors in our favorite botanicals, including hemp. In fact, hemp contains up to 120 different terpenes and terpenoids. In the same way aromatherapy works, inhaling the scent of certain terpenes in nature has been associated with a boost in emotional well-being. The sweet, floral scent of the terpene linalool, for instance, found in lavender, has a calming, sedative effect. Limonene, a terpene found in citrus fruits and peppermint, has a mood-elevating effect, while pinene, found in sage and conifers has been shown to aid in alertness and memory retention.
